BREDA NEWS

New products which complete the range both on Residential and Industrial fields, new panels finishing and restyling of current models, are just some news which will renovate the catalogue of Breda products, starting from September 2012.

Discover with us all the news!

Phenix - multi

sectional door PHENIX

THE SECTIONAL REVIVE WITH NEW LIFE

For the situations where is not possible the installation of a normal sectional door, now the sectional slide also on the sides.

Phenix, the Breda's side sectional door, is the best solution.

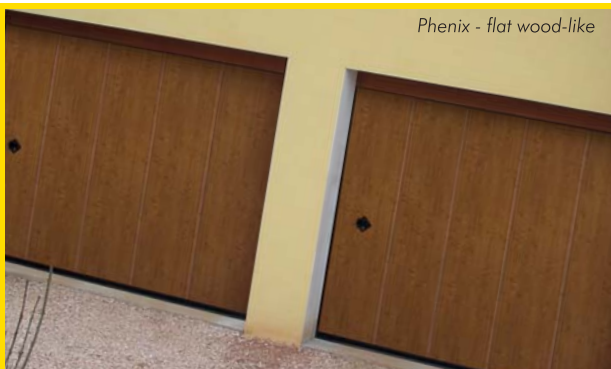

Phenix - with blocks

NOW THE SECTIONAL SLIDES ALSO Laterally

For every situation in which the installation of a normal sectional doors is not possible, for example a garage where the passage area is reduced or the internal walls are inclined, now we have Phenix, the side sectional door by Breda.

Thanks to the particular horizontal sliding system, Phenix is the best solution to clear the architectural ties and, in the meantime, you can benefit from a Breda sectional door with all the consequent advantages: insulated panels, wide range of colours and unlimited personalization.

Phenix - flat wood-like

PHENIX

The side sectional by Breda keeps the same finishing as sectional. Colours, finishing, drawings, motors and accessories are the same as the standard sectional's version with vertical movement.

info on: www.bredasys.com

The panels slide on this particular floor's bend. This special track allows a perfect and silent sliding.

The upper counterframes are already assembled with the upper track in order to facilitate the installation on the internal opening and in order to reduce the installation time and costs.

The trolley with rollers keeps the panel on correct sliding's position, cleaning up at same moment the track.

The Breda's handle, rhombus design, is the same also on side sectional and available in all the options.

sliding door ATLANTE

NEW BORN ON BREDA

Atlante has important features as adaptability
in every context and easy installation.
Atlante is the new way to conceive the sliding door.

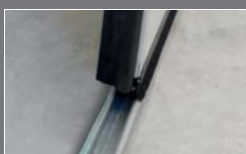

The track wainscot casing for external tracks covers the door and protects it against the bad weather, and in the meantime takes care of the aesthetic quality.

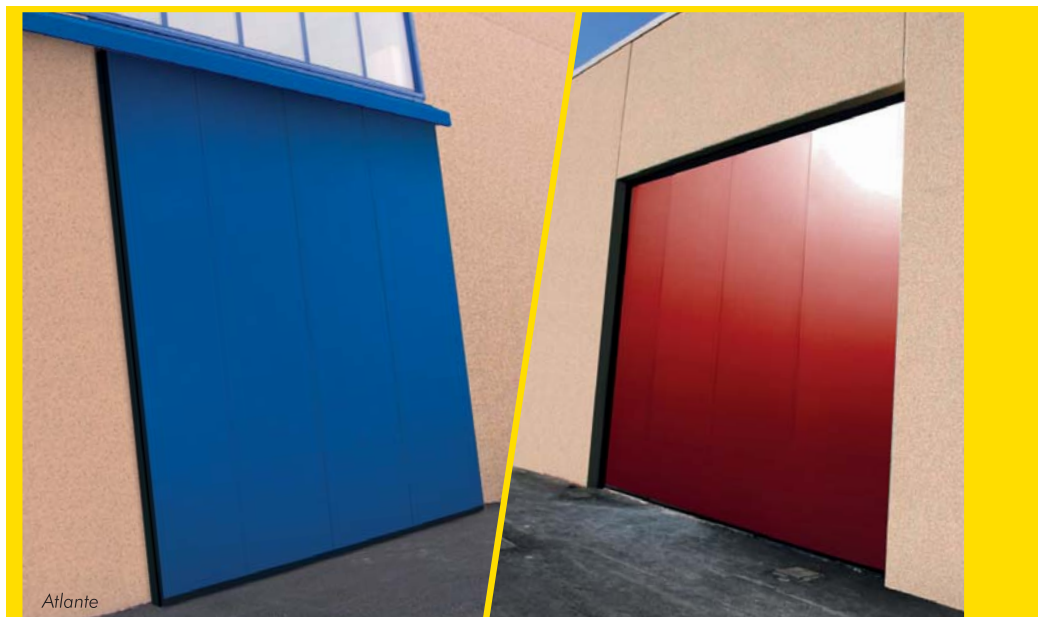

In the version hanged, the trolley with wheels supports the wings in order to let the door slide in a linear way.

In the version with floor rollers, the roller applied on the bottom part of the wings permits the sliding of the door without effort.

In the version with floor track, the door slides on a bracket till the complete closing.

FOR LARGE OPENING, ARE NEEDED LARGE CLOSINGS

Atlante joins the doors of the Book Line, integrating the range of products.

Atlante has a perfect adaptability to all the different architectural context and can be easily installed.

It joins the models of our Book Line inheriting the panels and other components, but with a new type of sliding opening.

Available with the following configurations:

hanged, with and without floor track and with floor rollers.

ATLANTE

Atlante by Breda is easy to be installed in every context.

roller door **LAMPO**

THE HIGH-SPEED DOOR SELF-ADJUSTING

Fast and self-adjusting, the new high-speed door by Breda for the future.
It's Lampo, the new roll up high-speed door
It bends but does not break.

Lampo - winding

THE HIGH-SPEED DOOR WITH SELF-ADJUSTING

Quickly in an eye blink, even self-adjusting.

Lampo is perfect for all the working contexts with frequent transit of goods, people and vehicles.

Lampo is the best solution as practicality:

In case of crash and pad is pushed out of the guides, it is able to slide again on the correct way.

Always with maximum speed, because time is money.

Saetta - winding

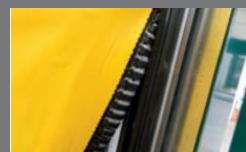

FULMINE and SAETTA

News also on the other high-speed doors Breda, Fulmine and Saetta have been renovated under several other features.

info on: www.bredasys.com

The conveyor grants that the high-speed door re-enter on the sliding channel after the crash.

At the moment of impact, the hinge comes out from the conveyor without tearing the coat. The high-speed door will then close, getting back in its place, without any damage.

The high-speed door's programmer allows the best possible settings.

New renewed coats for a better resistance and isolation to the bad weather.

LOADING DOCK LEVELLER

THE NEW LOADING POINTS

Dock leveller completely renovated, new installation systems, facilitated by the prefabricated casing.
Reduce the coasts but not the safety, now is possible with Breda!

The new casing is available with a frame easily pre-assembled, the parts are prepared in order to save time and above all the installation coasts.

New revisited lip in order to grant more safety, both to the persons and to the loading.

The new plungers grants a correct movement in order to facilitate the loading/unloading of any kind of goods.

A special block-system allows the fine tuning and/or the dock levellers' maintenance in complete safety.

Dock leveller

Casing

NEW DOCK LEVELLERS AND CASING

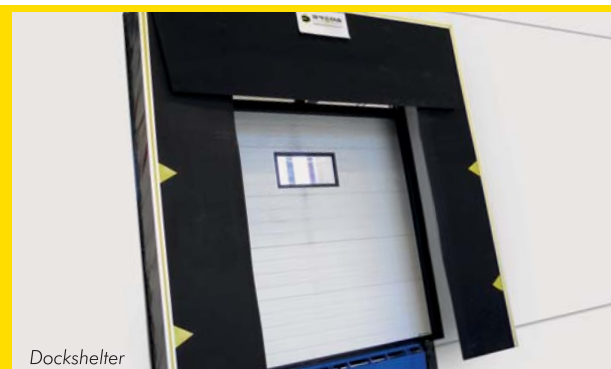

For industrial activities in which it is essential to facilitate the operations of loading and unloading from vehicles, the Breda's dock leveller is a safe solution, fast and since today also cheapest.

Besides ensuring the maximum safety thanks to the high load capacity and to the hydraulics' emergency stop device, the Dock Leveller is highly competitive also for what concern the installation's time and coasts.

This thanks to the installation's system with prefabricated casing, which does not require preliminary operations and reduce the overall sizes, therefore transport coasts and total initial coasts.

DOCKSHELTER

News also by the Breda's Dock Shelters, with new configurations available since now.

SAFETY IS OUR PRIORITY

All Breda's products satisfy all the norms concerning safety and provide a range of systems as standard equipment. Everything is tested and checked with maximum attention, in order to supply the best product.

All our products are granted by CE certification according to the compulsory specifications for the products marketed on European Community. Breda adopt since years the Quality Management System, according to the norm UNI EN ISO 9001:2008 and the Environmental Management System, according to the norm UNI EN ISO 14001:2004.

A further guarantee of constructive quality and company's reliability.

NEW PANELS SMOOTH MADE IN PET & NEW FINISHING RIGATINO

Since today, Cupis and Venus are more "green": the similar wood panels are not produced with the traditional PVC film anymore but with an innovative PET film which respect the environment.

A material that, thanks to the excellent technical characteristics, result as completely non-toxic and recyclable.

The colours available with PET smooth finishing, golden oak, light oak and walnut, are obtained with an innovative lamination's technology and subsequent application of plastic film which is protected by an effective shielding against the UV rays. Moreover, are available also 4 colours with the new finishing "rigatino": Golden Oak, Walnut, Mahogany and Green.
